

CBP travels to and resides on air filters where it removes odors until filter replacement.

Handling filters, even knowing their location, isn't required.

INSTRUCTIONS

(for dosing air filters with CBP)

- 1) Verify zone's fan switch is ON.
- 2) Shake bottle; tap lid; uncap bottle.
- 3) Puff 5 strong, black puffs per each square foot of grill area into zone's return air duct grill(s).
- 4) Leave zone fan ON at all times.
