

Nano Activated Carbon Powder (NACP), Applied to Air Filters, Converts Them into Indoor Air Cleaners.

NACP in water filters removes tastes and odors and makes drinking water clean and attractive. NACP in room air cleaners adsorbs airborne odors and makes indoor air clean and attractive. Applying NACP to air filters converts them into indoor air cleaners.

Our clients are supplied the following materials at no cost.

NACP dry powder

While air filters are in place and indoor air is circulating, dose the filters by puffing NACP at the rate of 10 puffs per foot² of area of the largest return air intake grill within each zone

NACP liquid spray

Before installation, spray the air intake side of each air filter with NACP liquid to an evenly-distributed light gray color.

Cloth

20-inch wide Kimberly Clark's *Intrepid*[®] electret, machine-treated with NACP

Place *Gray Matter*[®] media directly on cooling coils in place of the sponge or screen-type air strainer. Replace media when air flow is reduced.
