

A Portable Chemical Pot Feeder Treats MANY Systems

A converted garden sprayer suffices. It connects to any valve on the system having garden hose thread.

Corrective treatment chemical is dissolved, poured into the feeder and pressurized with the hand pump up to 60 psi.

The hand valve is used to feed chemical solution into the system.

cost: \$36

The usual alternate - a expensive, dedicated pot feeder which treats ONE system

pot feeder:	\$350
hardware:	\$50
<u>installation:</u>	<u>\$200</u>
total:	\$600
